System Modules

1. User and Access Management Module

- Manages user registration and secure login processes.
- Implements role-based access control (Applicant, Staff, Reviewer, Administrator).
  Provides user profile management functionality.
- Integrates authentication and security mechanisms, including One-Time Password (OTP) verification and optional Two-Factor Authentication (2FA).
  Ensures encrypted password storage and secure session management.
- Maintains activity logs for monitoring and accountability.

2. Permit Application Management Module

- Supports online submission of new business permit applications.
- Handles business permit renewal processing.
- Provides configurable digital forms with built-in validation rules.
- Allows applicants to edit applications prior to final submission.
- Manages the application status lifecycle (Draft → Submitted → Under Review → Approved/Rejected).
  Enables structured review and approval workflow for staff.

3. Digital Document Management Module

- Allows uploading of supporting documents (PDFs, images, and other required formats).
- Ensures secure digital storage of uploaded files.
  Supports document verification workflow for reviewing officers.
- Provides document preview and download functionality.
  Implements version control for updated or re-uploaded documents.
  Maintains digital archival of records for future reference and compliance purposes.

4. Application and Renewal Tracking Module

- Provides real-time tracking of application and renewal status.
- Displays status timeline and application history.
- Supports internal workflow routing among authorized personnel.
- Offers dashboard views tailored for applicants and administrative users.
- Enables monitoring of pending, approved, and rejected applications.

5. Claim Scheduling Management Module

Administrative Functions:

- Allows administrators to configure available claiming dates
- Enables creation of specific time slots (e.g., 8:00–9:00 AM).
- Sets maximum applicant capacity per time slot.
- Blocks holidays or unavailable dates.
- Provides monitoring of daily claiming schedules.
- Allows filtering of schedules by date, status, or applicant.
- Supports exporting of claiming schedule reports.

Applicant Functions:

- Displays available claim dates and time slots.
- Shows remaining slot capacity in real time.
- Validates slot availability upon selection.
- Temporarily reserves selected slots during the confirmation process.
- Confirms schedule and generates a unique Claim ID.
- Automatically updates slot capacity upon confirmation.
- Allows rescheduling requests (subject to availability and system policy).
- Releases previous slot upon successful rescheduling.
- Supports schedule cancellation and logs all related activities.

6. Claim Reference and Reporting Module

This module manages the generation of claim reference numbers, validation during claiming, and system reporting functions.

Claim Reference Generation

- Enables administrator or staff to review and approve permit applications or renewals.
- Retrieves approved applicant information and corresponding permit details from the system.
- Verifies the linked claim schedule associated with the approved transaction.
- Automatically generates a unique claim reference number.
- Stores the claim reference number in the database together with:
    - Applicant name
    - Business name
    - Application status
    - Claim schedule
    - Transaction details
- Displays the generated claim reference number to the applicant.
- Allows the applicant to print or save the claim reference for claiming purposes.

Claim Verification and Processing

- Allows staff to search or input the claim reference number during the scheduled claim date.
- Validates the authenticity of the claim reference and confirms that it matches the approved applicant record.
- Displays the applicant's claiming details and current transaction status.
- Enables staff to confirm readiness for permit release.
- Records all claim-related activities for monitoring and audit trail purposes.

Reporting Functionality

- Generates reports on:
  - Approved permits
  - Scheduled claims
  - Claimed permits
  - Unclaimed permits
  - Released permits
- Produces daily, weekly, and monthly summary reports.
  Supports exportable reporting for administrative documentation and compliance monitoring.

7. Permit Issuance and Certification Module

This module manages the final issuance and release of approved business permits or certifications.

Issuance Preparation

- Allows staff to access the approved applicant record within the system.
- Verifies that the application or renewal status is approved.
- Confirms the validity of the claim reference and claimant details.
- Ensures all required records and documentation are complete before issuance.
- Prepares the necessary permit issuance information based on approved data.

Permit Generation and Release

- Generates the official printable business permit or certification document.
- Allows staff to review the generated permit prior to release.
- Enables printing and official release of the permit to the applicant.

Status Update and Record Keeping

- Updates the transaction status as:
  - Issued
  - Released
  - Completed
- Records the following details:
  - Issuance date
  - Release status
  - Staff action
  - Completed transaction details
- Stores issuance history for future monitoring, audit, and documentation purposes.
